71.

Definition of buffering agents.

- Buffering agents are materials used to counter acidic and alkaline changes during storage or processing steps, thus improving the flavour and increasing the stability of foods.

(b)

"Irradiation facility" means any facility which is capable of being utilized for treatment of food by irradiation.

(c)

"Operator of irradiation facility" means any person appointed as such by licensee who satisfies the qualifications and requirements as for training specified in Schedule II of the Atomic Energy (Control of Irradiation of Food) Rules, 1991.

(d)

"Irradiated food" means articles of food subjected to radiation by:-

(i)

Gamma rays;

(ii)

X-rays generated from machine sources operated at or below an energy level of 5 million electron volts; and

(iii)

Sub-atomic particles, namely, electrons generated from machine sources operated at or below an energy level of 10 million electron volts, to dose levels as specified in Schedule I of the Atomic Energy (Control of Irradiation of Food) Rules, 1991.

74.

Dose of Irradiation.

(1)

Save as provided in sub-rule (2), no food shall be irradiated.

(2)

No article of food permitted for irradiation specified in column (2) of the Table given below shall receive the dose of irradiation in excess of the quantity specified in column (3) of the said Table at the time of irradiation:-

The irradiation shall conform to the dose limit and the radiation source to the specific conditions prescribed for each type or category of food specified for treatment by irradiation, under the Atomic Energy (Control of Irradiation of Food) Rules, 1991.

(b)

Food which has been treated by irradiation shall be identified in such a way as to prevent its being subjected to re-irradiation.

(c)

The irradiation shall be carried out only by personnel having the minimum qualifications and training as prescribed for the purpose under the Atomic Energy (Control of Irradiation of Food) Rules, 1991.

(d)

Food once irradiated shall not be re-irradiated unless specifically so permitted under these rules.

Identification

Solubility Insoluble in water, soluble in acetone and in Benzene.

Intra Red Spectrum Obtain the infra-red spectrum of a thin film of the sample deposited on a potassium bromide plate-Scan between 600 and 4000 wave numbers. Compare with typical spectrum obtained from pure Ester gum.

Test for absence of Tall Pass the test as given below:

Oil Rosin (Sulfur test) When sulphur containing organic compounds are heated in the presence of sodium formate, the sulphur is converted to hydrogen sulphide which can readily be detected by the use of lead acetate paper. A positive test indicates the use of tall oil rosin instead of wood rosin.

Apparatus-Test Tube: Use a standard, 10x75mm, heat resistant, glass test tube-Burner, Bunsen: A small size burner of the microflame type is preferred.

Reagents-Sodium Formate Solution : Dissolve 20g of reagent grade sodium formate, $NaOOCCH_3$, in 100 ml of distilled water.

Lead Acetate Test Paper- Commercially available from most chemical supply houses.

Procedure - Weigh 40-50 mg of sample into a test tube add 1- 2 drops of sodium formate solution. Place a strip of lead acetate test paper over the mouth of the test tube. Heat the tube in the burner flame until fumes are formed that contact the test paper. Continue heating for 2-5 minutes. There must be no formation of a black spot of lead sulphide indicating the presence of sulphur containing compounds. Detection Limit: 50 mg/kg sulphur.

Drop softening point Between 88°C and 96°C

Arsenic Not more than 3 ppm.

Lead Not more than 10 ppm

Heavy metals (as lead) Not more than 40 ppm

Acid value Between 3 and 9

Hydroxyl number Between 15 and 45.

(a)

tartaric acid or its salts, or both,

(b)

acid salts of phosphoric acid, or

(c)

acid compounds of aluminium, or

(d)

any combination of the foregoing

[A.17.07-OLIVE OIL means the oil expressed from fruit of the olive tree (*Olea europaea* ssp. *olea* Hoffm. et Link). It shall be of three types :-

(i)

VIRGIN OLIVE OIL means the oil obtained from the fruit of the olive tree by mechanical or other physical means under conditions, particularly thermal, which do not lead to alteration of the oil. Virgin olive oil is oil which is suitable for consumption in the natural state without refining. It shall be clear, yellow to green in colour, with specific odour and taste, free odours or tastes indicating alteration or pollution of oil. It shall be free from rancidity, suspended or other foreign matter, separated water, added colouring or flavouring substances or mineral oil.

(ii)

REFINED OLIVE OIL means the oil obtained from virgin olive, the acid content and or organoleptic characteristics of which render it unsuitable for consumption in the natural state, by means of refining methods which do not lead to alterations in the initial glyceridic structure. It shall be clear, limpid without sediment, yellow in colour, without specific odour or taste and free from odours or tastes indicating alteration or pollution of oil. It shall be free from rancidity, suspended or other foreign matter, separated water, added colouring or flavouring substances or mineral oil.

Further, if the oil is obtained by the method of solvent extraction and the oil imported into India whether obtained by solvent extraction or otherwise, it shall be supplied for human consumption only after refining and shall conform to the standards laid down under Item A.17.15. The oil so refined shall not contain Hexane more than 5.00 ppm.

(iii)

REFINED OLIVE-POMACE OIL means the oil obtained from "olive pomace" by extraction by means of solvents and made edible by means of refining methods which do not lead to alteration in the initial glyceridic structure. It shall be

clear, limpid, without sediment, yellow to yellow-brown in colour, without specific odour or taste and free from odours or tastes indicating alteration or pollution of the oil. It shall be free from rancidity, suspended or other foreign matter, separated water, added colouring or flavouring substances or mineral oil. Further, if the oil is obtained by the method of solvent extraction and the oil imported into India whether obtained by solvent extraction or otherwise, it shall be supplied for human consumption only after refining and shall conform to the standards laid down under Item A.17.15. A.32-1. MINERAL WATER means includes all kinds of mineral water or natural mineral water by whatever name it is called and sold.

2. Description and Types of Mineral Water.-(i) Natural mineral water is water clearly distinguished from ordinary drinking water because--

(a)

it is characterised by its content of certain mineral salts and their relative proportions and the presence of trace elements or of other constituents;

(b)

it is obtained directly from natural or drilled sources from underground water- bearing strata and not from public water supply for which all possible precautions should be taken within the protected perimeters to avoid any pollution of, or external influence on, the chemical and physical qualities of natural mineral water;

(c)

of the constancy of its composition and the stability of its discharge and its temperature, due account being taken of the cycles of minor natural fluctuations;

(d)

it is collected under conditions which guarantee the original microbiological purity and chemical composition of essential components;

(e)

it is packaged close to the point of emergence of the source with particular hygienic precautions;

(f)

it is not subjected to any treatment other than those permitted by this standard.

(ii)

Naturally Carbonated Natural Mineral Water-A naturally carbonated natural mineral water is a natural mineral water which, after possible treatment as given hereunder and re-incorporation of gas from the same source and after packaging, taking into consideration usual technical tolerance, has the same content of carbon dioxide spontaneously and visibly given off under normal conditions of temperature and pressure.

(iii)

Non-Carbonated Natural Mineral Water-A non-carbonated natural mineral water is a natural mineral water which, by nature and after possible treatment as given hereunder and after packaging taking into consideration usual technical tolerance, does not contain free carbon dioxide in excess of the amount necessary to keep the hydrogen carbonate salts present in the water dissolved.

(iv)

Decarbonated Natural Mineral Water-A decarbonated natural mineral is a natural mineral water which, after possible treatment as given hereunder and after packaging, has less carbon dioxide content than that at emergence and does not visibly and spontaneously given off carbon dioxide under normal conditions of temperature and pressure.

(v)

Natural Mineral Water Fortified with Carbon Dioxide from the Source-A natural mineral water fortified with carbon dioxide from the source is a natural mineral water which, after possible treatment as given hereunder and after packaging, has more carbon dioxide content than that at emergence.

(vi)

Carbonated Natural Mineral Water-A carbonated natural mineral water is a natural mineral water which, after possible treatment as given hereunder and after packaging, has been made effervescent by the addition of carbon dioxide from

another origin.

3. Treatment and handling.-Treatment permitted include separation from unstable constituents, such as compounds containing iron, manganese, sulphur or arsenic, by decantation and/or filtration, if necessary, accelerated by previous aeration.

The treatments provided may only be carried out on condition that the mineral content of the water is not modified in its essential constituents, which give the water its properties.

The transport of natural mineral waters in bulk containers for packaging or for any other process before packaging is prohibited. Natural mineral water shall be packaged in clean and sterile containers.

The source or the point of emergence shall be protected against risks of pollution.

The installation intended for the production of natural mineral waters shall be such as to exclude any possibility of contamination. For this purpose, and in particular :-

(a)

the installations for collection, the pipes and the reservoirs shall be made from materials suited to the water and in such a way as to prevent the introduction of foreign substances into the water;

(b)

the equipment and its use for production, especially installations for washing and packaging, shall meet hygienic requirements;

(c)

if, during production it is found that the water is polluted, the producer shall stop all operations until the cause of pollution is eliminated;

3A.

[Packaging materials.-It shall be packed in clean, hygienic, colourless, transparent and tamperproof bottles/ containers made of polyethylene (PE) (conforming to IS: 10146 or polyvinyl chloride (PVC) conforming to IS: 10151 or polyalkylene terephthalate (PET and PBT) conforming to IS: 12252 or polypropylene conforming to IS : 10910 or foodgrade polycarbonate or sterile glass bottles suitable for preventing possible adulteration or contamination of the water.

All packaging materials of plastic origin shall pass the prescribed overall migration and colour migration limits.]

B. List sorted by alphabetical Order-International Numbering System (INS) for Food Additives

The following list sorted by alphabetical order alongwith INS No. is only for identifying the INS No. of these food additives or their synonyms as per Codex. There are the list of food additives as per Codex and the food additives allowed under the PFA Rules, 1955 are listed in these rules and Appendix "B" and Appendix "C" of the said rules.

The list given below as published by Codex as on date. For any revision JECFA/Codex website may be referred (www.codexalimentarius.net; www.codexalimentarius.net/web/Lecfa).
